SUMMARY

Logistics Technology undergraduate at UEH (GPA 3.89/4.00) with project experience in supply chain analytics, mathematical optimization, and AI-driven operational solutions. Strong foundation in data analysis, quantitative modeling, and supply chain planning, with a keen interest in manufacturing and warehouse operations. Seeking to apply AI/ML, demand forecasting, and optimization techniques to improve operational efficiency, inventory management, and data-driven decision-making.

EDUCATION

Bachelor of Engineering in Logistics Technology - University of Economics Ho Chi Minh City (UEH) **2024 - Present**
GPA: 3.89/4.00 | Average: 8.99/10
Thesis (In Progress): *Decision Support for Smart Logistics: Agentic AI for Integrated Forecasting and Scheduling*
Exchange Program - National United University (NUU), Miaoli, Taiwan **Feb 2025 - Jun 2025**
Exchange Program - Rajamangala University of Technology Lanna (RMUTL), Thailand **Jun 2026 - Jul 2026**

RELEVANT PROJECT EXPERIENCE

SCMission 2026: The Vanguard Vietnam - Top 20 **2026**
Supply Chain Planning & Distribution Optimization - Team Leader

- Led production and inventory planning for 6 SKUs across 3 export markets, integrating ABC classification, MPS/MRP, BOM-based material planning, and capacity constraints; identified an 88,174-unit modeled shortage, with 51% concentrated at the main production bottleneck.
- Developed a 5-page Distribution Intelligence System to monitor shipment ETAs, DC inventory coverage, and service risks; identified 38 delayed shipment lines and 2 of 4 DCs below one-week safety-stock coverage under a disruption scenario.
- Planned warehouse/DC allocation and distribution of 236,356 units across 4 DCs and 37 loads; evaluated FCL/LCL strategies, identifying a 10.3% modeled reduction in ocean freight costs.

LogiChain 2026: The Veilreign Viet Nam – Top 20 ***(In Progress)*** **2026**
ESG Investment & Supply Chain Decision Analytics - Team Leader

- Developed 2027-2031 demand forecasts using ESG-linked sales conversion, shift-share analysis, and capacity-constrained scenarios; identified carbon capacity as the primary growth constraint from 2030.
- Built a 5-year financial and working capital model integrating receivables, inventory, payables, CAPEX/OPEX, and cash flow; projected net working capital requirements rising from $3.01M to $5.18M by 2029.
- Evaluated four operating strategies through sensitivity analysis and CRITIC-TOPSIS; quantified $21.0M in modeled revenue at risk from a one-year investment delay and identified a hybrid strategy with $13.5M in additional projected revenue versus the base option.

CTD Scholars 2025 - UEH Award B **2025**
AIoT-Based Operational Monitoring & Product Verification - Team Leader

- Led the development of an AIoT monitoring MVP for cold-chain quality verification, combining IoT sensor monitoring and computer-vision modules through a shared dashboard with separate data streams.
- Led computer-vision model evaluation using DINOv2-based feature extraction and 3D-CNN classification, achieving 94.89% accuracy and 0.9789 ROC-AUC on a 137-sample evaluation set.
- Evaluated system performance and reliability, identifying DINOv2 feature extraction as the primary inference bottleneck; the IoT monitoring pilot recorded 98.27% session uptime and 0% network packet loss.

UEH Young Researcher Award 2024-2025 - Award B **2025**

Deep Learning for Swiftlet Nest Monitoring Robots - 3D Object Recognition (PointNet++)

- Trained a PointNet++ deep learning model for swiftlet nest recognition and classification using 3D point-cloud data, including scans from an Intel RealSense D415 depth camera, with data preprocessing and augmentation.
- Evaluated the model using 100 point-cloud files (.PLY) with a 70/10/20 train-validation-test split and repeated augmentation-based testing; reported 85% recognition accuracy, decreasing to 75% under low-light conditions.

ACTIVITIES & LEADERSHIP

OpenLAB - 3I, UEH **2024 - 2025**

Standing Member

- Participated in research, testing, and hands-on operation of mobile robotic systems.
- Participated in research for the Last-Mile Delivery Optimizer (LMDO) project, focusing on logistics modeling and algorithm evaluation.
- Contributed to research projects that earned two Award B honors for OpenLAB: UEH Young Researcher Award (2024-2025) and CTD Scholars 2025.

CTD, UEH **2025 - Present**

Academic Affairs Member

- Support academic activities and student engagement within CTD.

AWARDS & HONORS

- **2026 –** Top 20, LogiChain 2026: The Veilreign Viet Nam ***(In Progress)***
- **2026 -** Top 20, SCMission 2026: The Vanguard
- **2025 -** Award B, CTD Scholars 2025
- **2025 -** Second Prize, Robot Challenge 2025
- **2024-2025 -** Award B, UEH Young Researcher Award

SKILLS

Supply Chain: Demand & Inventory Planning, MPS/MRP, Capacity Planning, Inventory Control (ABC, Safety Stock, Reorder Point), Warehouse & Distribution Planning

Data Analytics & Forecasting: Python, SQL *(MySQL, PostgreSQL),* Excel, Power BI, CRISP-DM, Time-Series Forecasting *(Regression, Exponential Smoothing, ARIMA, LSTM),* Sensitivity Analysis, Hypothesis Testing, Backtesting

Optimization & Modeling: Mathematical Modeling *(LP/MILP),* CPLEX, OR-Tools, Routing & Network Optimization

Technology: Machine Learning *(scikit-learn, XGBoost)*, Deep Learning *(PyTorch),* Agentic AI, AI-Assisted Development

Soft Skills: Analytical Thinking, Problem Solving, Teamwork, Communication, Adaptability

Languages: Vietnamese *(Native)*, English *(Intermediate - written and verbal communication)*
