SUMMARY

Logistics Technology undergraduate at the University of Economics Ho Chi Minh City (UEH), with a GPA of 3.89/4.00 and hands-on project experience in distribution planning, logistics optimization, and data analytics. Led projects involving multi-DC distribution, last-mile routing, and shipment visibility solutions using Power BI. Applying first-principles thinking and a data-driven approach to understand complex systems and improve operations. Seeking to apply analytical and problem-solving skills to Distribution Center Operations at Vinamilk, with a strong interest in operational efficiency and continuous improvement.

EDUCATION

Bachelor of Engineering in Logistics Technology - University of Economics Ho Chi Minh City (UEH) **2024 – Present**
GPA: 3.89/4.00 | **Average:** 8.99/10
Thesis (In Progress): *Decision Science for Smart Logistics: Agentic AI for Integrated Forecasting and Scheduling*
Honors: Award B - UEH Young Researcher Award 2024-2025; Award B - CTD Scholars 2025.
National United University (NUU), Miaoli, Taiwan **Feb 2025 - Jun 2025**
Engineering Exchange Program
Rajamangala University of Technology Lanna (RMUTL), Thailand **Jun 2026 - Jul 2026**
International Student Exchange Program - Faculty of Engineering

RELEVANT PROJECT EXPERIENCE

SCMission 2026: The Vanguard - Vietnam **2026**
Supply Chain Planning & Distribution Optimization - Team Leader

- Led integrated supply chain planning for 6 SKUs across 3 export markets, translating MPS/MRP and capacity-based production plans into a multi-DC distribution pipeline covering 236,356 units, 4 DCs, and 37 unique loads, with shipment allocation and delivery scheduling.
- Evaluated FCL/LCL shipping alternatives, achieving a 10.3% modeled ocean freight cost reduction (\$74,384 to \$66,751).
- Developed shipment visibility and disruption-monitoring tools, including a 5-page distribution control tower, identifying 38 delayed shipment lines and 2 DC inventory-buffer risks under a simulated 15-day port-congestion scenario.

Last-Mile Delivery Optimizer 2025 **2025**
Multi-Depot Routing Modeling & Optimization Evaluation - Team Leader

- Processed and structured customer, depot, vehicle, and road datasets to prepare inputs for a multi-depot last-mile delivery optimization problem in Da Nang City, including a case with 24 delivery zones.
- Formulated an MD-VRP model, defining the objective function and constraints for transportation cost, vehicle capacity, route distance, working hours, and delivery time windows.
- Evaluated ALNS and Tabu Search algorithms developed by teammates with results showing 875 customers served, 9.7% reduction in time-window penalties, a 0.2% improvement in the modeled objective, and zero vehicle-capacity violations.

CTD Scholars 2025 - UEH Award B **2025**
AIoT-Based Operational Monitoring & Product Verification - Team Leader

- Mapped the end-to-end logistics process from supplier transportation to warehouse receiving, unloading, handling, and product tracking.
- Designed the AIoT monitoring workflow, defining how sensors, data flows, computer vision, and tracking were applied across logistics stages.
- Led computer-vision classification for product-condition verification and abnormality detection.

- Developed the main control software and automated workflow for robotic storage and retrieval tasks.
- Integrated DeepSeek-based AI and voice commands with the robot control system to support automated warehouse operations.

ACTIVITIES & LEADERSHIP

OpenLAB - 3I, UEH

2024 – 2025

Standing Member

- Participated in research, testing, and hands-on operation of mobile robotic systems.
- Participated in research for the Last-Mile Delivery Optimizer (LMDO) project, focusing on logistics modeling and algorithm evaluation.
- Contributed to research projects that earned two Award B honors for OpenLAB: UEH Young Researcher Award (2024–2025) and CTD Scholars 2025.

CTD, UEH

2025 - Present

Academic Affairs Member

- Support academic activities and student engagement within CTD.

AWARDS & HONORS

- 2026 - Top 20, SCMission 2026: The Vanguard
- 2025 - Award B, CTD Scholars 2025
- 2025 - Second Prize, Robot Challenge 2025
- 2024-2025 - Award B, UEH Young Researcher Award

SKILLS

Supply Chain: Distribution Planning & Modeling, MPS/MRP, Transportation & Routing Modeling, Project Management
Data & Optimization: Data Analysis & Visualization, Optimization Modeling (CPLEX, OR-Tools), Excel, Power BI
Technology: Agentic AI, Computer Vision Applications, IoT, Robotics Software
Soft Skills: Leadership, Teamwork, Communication, Problem Solving, Adaptability, Continuous Learning
Languages: Vietnamese (*Native*), English (*Intermediate*)
